When the user moves their wrist, the rotor spins freely, harnessing that motion. This rotational movement is translated into energy, which winds the mainspring, thereby maintaining the energy reserve necessary for optimal performance. Efficiency is paramount, as the rotor is designed to maximize energy generation with minimal movement. Its ...

The Rolex Caliber 3135 Movement. Described as a "workhorse" this caliber was Rolex's main time and date movement from 1988 to 2015. ... Shop Rolex Watches. Rolex ...

Automatic Rotor. The GEN 3235 movement has upgraded from the pin bearing of the 3135 movement to the ball bearing, which greatly improves the winding efficiency of the movement (the 4130 movement is also ball bearing). VS and VR improve this part as well, but there are only 7 balls in inner grooves. The inner grooves of GEN are all filled with ...

Don't get me wrong, it's still a great movement, and is capable of reasonably good timing, but in their quest to improve one area - automatic winding wear and efficiency - they ...
