The large-scale battery energy storage system results in the generation of massive data, which brings new challenges in data storage and calculation. BMS has been unable to meet the data communication and calculation in such a scenario.

How do we know if energy storage power station failure is real?

The operation data of actual energy storage power station failure is also very few. For levels above the battery pack, only possible fault information can be obtained from the product description of system devices. The extraction of the mapping relationship from symptoms to mechanisms and causes of failure is incomplete.

How machine learning is used in battery system inconsistency diagnosis?

With the development of computer technology, machine learning methods are widely used in battery system inconsistency diagnosis. These methods can be classified into two categories: inconsistent evaluation and classification. The workflow of machine learning battery inconsistency assessment is shown in Fig. 7.
