

What is the planning model for industrial and commercial user-side energy storage?

Based on this, a planning model of industrial and commercial user-side energy storage considering uncertainty and multi-market joint operation is proposed. Firstly, the total cost of the user-side energy storage system in the whole life cycle is taken as the upper-layer objective function, including investment cost, operation, and maintenance cost.

Do industrial and commercial users need distributed energy storage?

However, industrial and commercial users consume a large amount of electricity and have high requirements for energy quality; therefore, it is necessary to configure distributed energy storage. Based on this, a planning model of industrial and commercial user-side energy storage considering uncertainty and multi-market joint operation is proposed.

What is a multi-market joint energy storage planning framework?

A multi-market joint energy storage planning framework considering the energy market and ancillary service market is proposed. Considering the economic benefits of industrial and commercial user-side energy storage in the whole life cycle as the objective function, a double-layer programming decision-making model is constructed.

What is a user-side energy storage planning and operation simulation?

In the industrial and commercial user-side energy storage planning and operation simulation, the analysis will be based on the IEEE 30-node system, as shown in Figure 1. The electrical load on the industrial and commercial user side will also change with time. User load can be divided according to seasonal changes.

Should industrial and commercial users arrange energy storage?

Industrial and commercial users consume large amounts of electricity and have high requirements for a stable power supply. Therefore, it is necessary to encourage industrial and commercial users to arrange energy storage, and how to make reasonable planning is the main problem.

What is the service life of energy storage?

The service life of energy storage is about 20 years, and the benchmark discount rate is 5%. Based on this, the energy storage on the industrial and commercial user side is optimized. 4.2.1. ICUS-ES Planning Result Analysis (1) Operation cost analysis
