The overall BESS life span enhanced by 57 %. 4.2. Battery SOC effects on ESS Energy storage systems' stability and performance are highly affectedby the SOC.

Why do we need a large-scale development of electrochemical energy storage?

Additionally, with the large-scale development of electrochemical energy storage, all economies should prioritize the development of technologies such as recycling of end-of-life batteries, similar to Europe. Improper handling of almost all types of batteries can pose threats to the environment and public health .

How important is sizing and placement of energy storage systems?

The sizing and placement of energy storage systems (ESS) are critical factors in improving grid stability and power system performance. Numerous scholarly articles highlight the importance of the ideal ESS placement and sizing for various power grid applications,such as microgrids,distribution networks,generating,and transmission [167,168].
