

What is a backup battery power supply?

Backup battery power supply is designed for use during outages and unsafe voltage fluctuations, and provides surge protector with battery backup in the event of damaging power surges and spikes.

Which APC battery backup is best?

The APC BR1500G is an excellent battery backup with AVR and surge protection. It allows for easy cell replacement and the ability to add external backups. If you need a UPS and don't want to spend a lot, the APC UPS BE425M Battery Backup is for you.

Do you need an uninterruptible power supply (UPS)?

If you have important electronics that have to keep running when the power's out, you'll need an uninterruptible power supply (UPS). We've reviewed our recommendations and are confident these are still the best UPS devices you can buy. Many smart devices have built-in battery packs, with modern laptops packing enough cells to last a whole day.

What makes a good battery backup?

An automatic voltage regulator smoothes over brownouts and spikes without needing to change your battery. It's one of several capabilities you'll want to look for in the best battery backups. Losing power is stressful, so don't let your offline router and computer add to it.

Can a line-interactive battery backup work with sensitive gear?

According to the specs, the line-interactive battery backup can correct for "brownouts and overvoltages from 83V to 147V." At this price, though, it should be a surprise that it uses a simulated sine waveform (in backup mode) and may not perform adequately with sensitive gear.

TL;DR: When you want a reliable UPS, APC is one of the top brands for the job, and its BR100MS2 is a fantastic UPS for home and office use. It has ten standard outlets with surge protection (six with battery backup) and USB-A and USB-C charge ports. The 900W capacity can keep your devices running for quite some time.
