

Will gas-fired electricity save Australia's power system?

According to Professor Brear, gas-fired electricity would play a limited but critical role in keeping the power system stable and the transition to renewable energy at a lower cost. A large chunk of Australia's coal-fired power generation capacity will retire in the coming years. (AAP/Greenpeace)

Does Australia need a gas-fired power grid?

The Net Zero Project says gas-fired power capacity will be required for some time. (ABC News: Brendan Esposito) Australia's biggest power grid would need to triple in size within eight years and trillions of dollars would need to be spent, according to a report outlining the colossal task of achieving carbon neutrality by 2050.

What 99% of Australia's New battery capacity is wind or solar?

In Australia, 99% of new capacity is wind or solar. London-headquartered Eku Energy has committed \$500,000 to the Australian National University's battery storage and grid integration program as construction begins on the Williamsdale big battery in the Australian Capital Territory.

How much will Australia spend on solar projects in fy24?

An Oxford Economics Australia report has found electricity construction activity has been at a record high of \$19.2 billion over FY24, and with an expected investment of \$5 billion a year to FY30, the way forward for large solar projects is clear, especially...

Will renewables cut Australia's electricity emissions by 40%?

Renewables growth from 2015-2025 is on track to cut Australia's electricity sector emissions by nearly 40% in a decade, equivalent to emissions from all the nation's cars, commercial vehicles and planes.

How much money does Australia's hydrogen electrolyser manufacturing sector generate?

CSIRO has unveiled a new report that estimates Australia's hydrogen electrolyser manufacturing (HEM) sector could generate \$1.7 billion in revenue... The Australian Renewable Energy Agency (ARENA) will provide Fortescue with a \$10 million grant to develop, build, and demonstrate landmark...

Allegro Energy has secured a AUD 2.1 million (\$1.3 million) grant from the New South Wales state government to develop an Australian-made, water-based battery prototype capable of storing energy ...

pv magazine Australia offers bi-weekly updates of the latest photovoltaics news. We also offer comprehensive global coverage of the most important solar markets worldwide. ...

MAG Energy works with our customers to develop and build onsite solar generation assets to meet their specific needs. We work to understand project requirements, local jurisdictions and regulatory processes, and market opportunities to deliver the most cost-effective solutions. Our team has decades of combined

experience in solar development ...

Australia has topped the leaderboard for reducing its use of unabated fossil fuels and increase in clean power through electricity generation sources like solar, and faster than electricity demand, according to the International Energy Agency's (IEA) World Energy Outlook (WEO) 2024 report.. Along with Korea, Japan, Argentina, South Africa, Brazil and Mexico, ...

The storage imperative: Powering Australia's clean energy transition is authored by Associate Professor Guillaume Roger from Monash University's Faculty of Business and Economics.. His analysis shows that how we trade electricity today, and the financial instruments that support such trade, are inadequate to deal with intermittent energy and storage.

Pingback: Approval for 2 GWh battery in Australia - Energy Storage. Janet Fairlie-Cuninghame says: November 26, 2024 at 8:01 am. This is good news provided it was not built on a natural vegetation site. All natural forested land is needed for the role it is already playing in the carbon cycle especially within the Greater Sydney Basin and ...

Utility is the title of choice for decision makers at all levels of water and energy utilities, as well as other major players like consulting engineers and first-tier contractors. ... and explores the biggest news and issues across ...

4 ¶; As in every election over the last 20 years, at stake will be the question of whether Australia chooses a clean energy future, or prolongs the life of coal and gas - an outcome the ...

A landmark report modelling Australia's pathway to carbon neutrality by 2050 finds the country's biggest power grid will need to triple in size within eight years.

Energy Today provides a positive platform for the petroleum, gas, and future fuels industries, allowing in-depth coverage into new projects, integrity and maintenance, technology, and people who power this great sector.

Results from the Energy Transition Index of 2019 showed that advanced economies like that of Australia ranked 43 rd out of the 115 countries with a 64% score on the performance of their energy systems, and a remarkable 54% on their readiness in securing a sustainable, affordable and reliable energy future. Australia's state and territory ...

Federal Energy Minister Chris Bowen has announced that the next competitive tender in the Capacity Investment Scheme (CIS) will be increased in size by two-thirds to 10 GW as the government seeks to ensure the timely delivery of new wind and solar generation and storage facilities as the nation transforms its coal-reliant energy system.

As part of its comprehensive de-carbonization offerings for large commercial and industrial customers, MAG Energy can help develop and deploy a hydrogen strategy tailored to your needs. Green hydrogen can be produced by pairing solar and storage technologies with electrolyzers, leveraging significant investment tax credit benefits across all ...

ATCO's clean energy innovation hub (CEIH), launched in 2019 with the support of the Western Australia Government, aims to exemplify how hydrogen can be integrated into existing energy systems. The CEIH produces renewable hydrogen, which is then blended with natural gas into parts of the existing network.
