Do automation technologies increase employment?

When analysing the country level, it emerges that automation technologies increase employment in the long run (Autor and Salomons, 2018; Dekle, 2020; ?ahin, 2020).

How does automation affect the service sector?

The higher protection of the service sector against automation is because in this sector predictable physical (thus automatable) tasks are less frequent (Manyika, 2017; Nedelkoska and Quintini, 2018). Low-wage/low-skilled sectors (e.g., transport, storage, and post) are also affected by automation technologies (Bowles, 2014).

How can energy storage technology improve the power grid?

Resource Utilization Citation Ping Liu et al 2020 J. Phys.: Conf. Ser. 1549 042142 The application of energy storage technology can improve the operational stability, safety and economy of the power grid, promote large-scale access to renewable energy, and increase the proportion of clean energy power generation.

What are automation technologies?

Automation technologies are considered both in general (i.e., without distinguishing the type of automation technology) and, when possible, distinguishing by type (mainly industrial robots and artificial intelligence). A structured systematic review resulted in 102 publications recovered from Web of Science, Scopus, and manual searching.

Do automation technologies affect labour markets?

According to some studies, automation technologies have a positive impact on labour markets (Koch et al., 2019; Mann and Püttmann, 2018). Specifically, automation technologies reduce employment in manufacturing but increase it in the service sector, thus resulting in net job creation (Mann and Püttmann, 2018).
