Yes, anti-islanding protection is a fundamental feature of grid-tied inverters. This safety mechanism prevents the inverter from circulating electricity within the system, which could pose serious safety risks to utility workers and equipment. When the grid power fails, the inverter must quickly detect this condition and cease power export.

A 3-phase solar inverter offers 3 AC waveforms that connect back to your home grid system. With a phase shift of 120 degrees, there is a balanced distribution of power across all the voltage lines. The even distribution of power output reduces the risk of electrical issues such as phase overload and voltage imbalance.
