

What is a Shower Power Booster?

The Shower Power Booster is British designed and manufactured and is a simple cost-effective solution to common water pressure issues. Quiet in operation with a unique and compact design the Shower Power Booster can be installed by a confident DIYer to any shower, tap or hot water system to quickly improve performance.

How many Watts Does a Shower Power Booster use?

The Shower Power Booster requires just 12 watts and uses approximately twenty times less energy of a traditional pump. With a 5*Excellent Rating on Trust Pilot, a 2 or 3 year manufacturer's warranty, and free delivery, the Shower Power Booster is supported by responsive and dedicated customer service.

How much does it cost to run a Shower Power Booster?

The cost to run a Shower Power Booster for a 4 person household, taking one shower a day, 365 days a year, is £43.80. The running of a 12.5 watt Shower Power Booster for 20 minutes requires 0.0125 KW/HR of electricity, so the cost of electricity to run the pump is 0.15p. Therefore, the annual cost of running the Shower Power Booster is £55. This results in a saving of £125.68 per year.

Do electric showers need a power booster pump?

All electric showers require an incoming cold water pressure exceeding 0.8 Bar, lest the electric shower disengage its heating elements, resulting in either cold or excessively hot water. The Shower Power Booster Pump augments pressure and flow rates to prevent this occurrence.

How does a shower power booster pump work?

This Pump is designed to automatically increase very low flow rates. It is equipped with sensors that automatically activate the pump at flow rates from 1.5 L/min. Alternatively, it can be put in manual mode to solve even lower flow rates. How is a Shower Power Booster Pump installed?

Should you install a shower power booster pump before or after a boiler?

The Shower Power Booster Pump can be employed both before and after a Combi boiler. Installing it prior to the boiler serves to boost water pressure throughout the entire home, whereas installing it after the boiler offers support to up to three underperforming taps and showers.

The WrightChoice Energy Storage device is a very simple and low cost device designed for retrofitting to a traditional hot water tank or installed in a new tank. A DIY install in minutes for under £100 which pay for itself twice a year because it allows you to use off peak and surplus energy in the national grid to heat and store domestic hot ...

Grid booster energy storage projects have been launched by three out of Germany's four TSOs, and are placed at critical grid nodes to stabilise the grid and reduce operating costs. The other announced projects, by ...

The Shower Power Booster requires just 12 watts and uses approximately twenty times less energy of a traditional pump. With a 5* Excellent Rating on Trust Pilot, a 2 or 3 year manufacturer's warranty, and free delivery, the Shower Power ...

Upgrade your shower experience with this innovative shower pump. Compact, energy-efficient, and versatile for all setups. Premium quality, manufactured by Flowflex UK. This pump boasts the following advantages: It's ...

SP1 Manual Shower Power Booster Pump & Power Supply: WRAS Approved; Manually operated pump for boosting showers & taps; DIY install in 3 easy steps; Safe 12V DC - no electrician needed! Uses 5% energy of conventional ...
