Is 2023 a good year for energy storage?

It's been a positive year for energy storage in 2023,with new markets opening up and supply chain bottlenecks and price spikes for battery energy storage systems (BESS) easing,though challenges remain. A roundup of the biggest projects,financing and offtake deals in the sector that Energy Storage News has reported on this year.

Are battery electricity storage systems a good investment?

This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030,total installed costs could fall between 50% and 60% (and battery cell costs by even more),driven by optimisation of manufacturing facilities,combined with better combinations and reduced use of materials.

Should new energy vehicles be adopted in the private sector?

As Zhang and Bai (2017) indicate that new energy vehicles should be adopted in the private sector,it is urgent to understand people's perception towards new energy vehicle and willingness to pay for new energy bus fares.
