Are lithium batteries suitable for a 5G base station?

2) The optimized configuration results of the three types of energy storage batteries showed that since the current tiered-use of lithium batteries for communication base station backup power was not sufficiently mature, a brand-new lithium battery with a longer cycle life and lighter weight was more suitable for the 5G base station.

Should a base station battery be cleaned or uncleaned?

A cleaned and fully optimized base station battery runs longer than an uncleaned battery. Therefore, battery manufacturers advise keeping the battery clean so it can remain safe from acidic damage. If you do not check your battery thoroughly, it can lose its functionality and can get worse with time.
