Is a solar photovoltaic battery-supercapacitor hybrid energy storage system suitable for MATLAB Simulink?

In this paper, a solar photovoltaic (PV) powered battery-supercapacitor (SC) hybrid energy storage system has been proposed and its modeling and numerical simulation has been carried out in MATLAB Simulink. Different topologies of battery and SC have been explored and passive topology is found to be most suitable for the proposed model.

Why do hybrid storage systems need a super capacitor?

Super capacitor has a greater power density which allows the super capacitor to provide more power for a short period of time or super capacitor can supply peak power for a short duration, means we can say charging capacity of hybrid storage system increase.
