

When will Cape Verde's energy storage centre be operational?

During the presentation of the project, Cape Verde's National Director for Industry, Trade and Energy, Rito &#201;vora, announced that the energy storage centre is scheduled to be operational by 2030, with the aim of injecting 7% of renewable energy into the national public grid and 18% into that of the island of Santiago.

Why is the Cape Verde energy project important?

The project was a huge success and to this day remains one of the most important and influential strategic studies in the energy sector of Cape Verde.

What is the energy sector in Cabo Verde?

Directo Geral da Energia de Cabo Verde 2010 2011 Cape Verde energy sector is strongly characterized by consumption of fossil fuels (derived oil-primary imported oil), biomass (wood) and use of renewable energy particularly wind and solar power.

How much does the Santiago pumped storage project cost?

The Santiago Pumped Storage Project, which will be located in Ch&#227; Gon&#231;alves, in the municipality of Ribeira Grande de Santiago and will cost around 60 million euros, promises to significantly increase energy storage capacity, thus making it possible to increase the country's electricity production capacity.

What are the main objectives of hydro pumped-storage projects in Santiago Island?

The main objectives of the "Hydro pumped-storage projects in Santiago island" project were the identification of hydro pumped-storage projects and the performance of feasibility studies for potential sites.

the creation of an area base in Cape Verde as a solution to avoid environmental disasters and ensure the maintenance of our coast and ecosystem balance Implement aquaculture as a way to reduce stress on our live resources Strengthen and modernize port and fishing infrastructures, (operations in the Ports of Maio and Fogo, cruise terminals, and
