

Is small-capacity energy storage suitable for negotiated lease mode and Energy Performance Contracting?

In the follow-up research, the application scenarios and business models of energy storage should be studied in detail according to the type of energy storage. According to this study, small-capacity energy storage is suitable for negotiated lease mode and energy performance contracting model.

Are there any gaps in energy storage technologies?

Even though several reviews of energy storage technologies have been published, there are still some gaps that need to be filled, including: a) the development of energy storage in China; b) role of energy storage in different application scenarios of the power system; c) analysis and discussion on the business model of energy storage in China.

What are the application scenarios of microgrid energy storage?

The application scenarios of microgrid energy storage are divided into small off-grid energy storage, island microgrid energy storage and household energy storage. Small off-grid energy storage systems are used in remote areas that cannot be reached by the power grid.

What is energy storage?

Energy storage is mostly used in island distributed generation and microgrid energy storage projects. In the field of technology research, 32,462 SCI articles with the subject word "Energy Storage" in the "Web of Science" core database have been published in 2022. China has published 12,406 SCI articles, ranking first in the world.

What is a composite energy storage business model?

The composite energy storage business model is highly flexible and can fully mobilize power system resources to maximize the utilization of energy storage resources. The model can reduce the risk of energy storage investment and accelerate the development of energy storage.

How much will battery energy storage cost in 2022?

The International Energy Agency (IEA) finds that investments in battery energy storage are expected to reach \$20 billion by 2022, primarily owing to grid-scale development, accounting for 70% of the total investment flows.
