The Dominican Republic produced 0.09% of global greenhouse gas emissions in 2021 (the latest date with complete emissions data). This amounted to 43.8m metric tonnes of carbon dioxide equivalent, or MtCO₂e. These emissions represented an increase from 2020 by ...

Dominican Blue Carbon es una iniciativa que tiene como objetivo la investigaci3n y desarrollo de proyectos que contribuyan a la conservaci3n de lo sistemas marinos y costeros de Rep3blica Dominicana. Bajo esta premisa de conservaci3n y reforestaci3n se pretende conservar y aumentar los sumideros de carbono de estos ecosistemas, lo que se conoce como "Carbono ...

In the mangroves of the Montecristi Province in Northwest Dominican Republic we found C stocks ranged from 706 to 1131 Mg/ha. The medium-statured mangroves (3-10 m in height) had the highest C stocks while the tall (> 10 m) mangroves had the lowest ecosystem carbon storage. Carbon stocks of the low mangrove (shrub) type (< 3 m) were relatively ...

17. While the term "peasants" may be jarring due to its relationship to pre-industrial European populations, this intended correlation, first proposed by Mintz and continued in the field of Caribbean studies, is essential to establishing a sense of the all-encompassing control exerted by the sugar industry over the lands worked by these escaped populations.
