

Is Northvolt a low-cost battery chemistry?

As an alternative low-cost battery chemistry, Northvolt has since turned towards sodium-ion. Securing breakthroughs in battery design and manufacturing, the resulting sodium-ion technology has an energy density competitive with LFP. What's more, Northvolt's sodium-ion battery also overcomes the sustainability concerns of LFP.

Who is Northvolt's VP of Communications at Giga Europe?

Energy-Storage.news was talking to Anders Thor, Northvolt's VP of communications, whilst at Giga Europe in Stockholm, a two-day event (12 & 13 March) hosted by Benchmark Mineral Intelligence. The event brings together Europe's battery ecosystem, from gigafactories to raw material producers.

Where are Northvolt batteries made?

Northvolt only produces nickel cobalt manganese (NCM) batteries at the moment. The cell is produced at Northvolt Ett gigafactory in northern Sweden. Later this year, Scania will open a new battery factory in Södertälje in Sweden, where battery cells will be assembled into battery packs to kickstart production of heavy-duty electric trucks.

Does Northvolt have a Na-ion battery?

Northvolt is not alone in developing this technology. There are nearly 30 Na-ion battery manufacturing plants currently operating, planned or under construction, almost all in China. German startup VoltStorage is working on another form of battery, which also removes the need for lithium.

How many Gigafactory projects does Northvolt have?

Inside Northvolt's first gigafactory, Northvolt Ett, in Northern Sweden. The firm has six gigafactory projects, plus ESS assembly, battery recycling, R&D and joint venture projects. Image: Northvolt.

Does Northvolt have a problem with battery production?

A Reuters review of internal production sheets, other company documents, and conversations with four company sources indicate Northvolt continues to face challenges in boosting production levels for battery cells, the units that store and convert chemical energy into electricity.

The pair aim to establish the first giga-scale LFP cathode facility outside of mainland China, to be built somewhere in the Nordic region. The plant would be up and running in 2024 with the initial capacity to produce 10,000 ...

A foundation to Northvolt's low-carbon footprint comes from a commitment to power battery manufacturing with 100% fossil-free energy. Sustainability. The Northvolt way. All under one roof. We're re-writing the playbook on what it means to be a battery manufacturer by adopting a wide spectrum of battery supply chain activities in-house.

Le recyclage faisait partie de la vision de Northvolt depuis le début; mais ... D'autres technologies existent comme par exemple les LFP (lithium-fer-phosphate), mais leur niveau de recyclabilité est inférieur aux NMC (nickel ...

Northvolt is building nickel manganese cobalt (NMC) battery cells primarily because of its higher energy density than lithium iron phosphate (LFP), as well as its greater recycling value. The European industry is making a big push on recycling as a way to increase - in the long-term - the proportion of raw materials it can source domestically.

Es hat sich herausgestellt, dass Natrium-Ionen-Batterien eine Alternative zu herkömmlichen Lithium-Ionen-Zellen darstellen. Wie Northvolt vermeldete, gelang es dem Unternehmen, eine Natrium-Ionen-Zelle mit einer ähnlichen Energiedichte wie Lithium-Eisen-Phosphat-Zellen (LFP) zu entwickeln - ein bedeutender Meilenstein bei ...

In other words, LFP reemerged, lithium iron phosphate reemerged in 2018, 2019. The car-makers realized, "We don't necessarily have to make these cars with high nickel ...

Solar and wind power, electric cars, saunas, and cranes. Batteries are crucial in remaking our grid into the clean, distributed, flexible and robust system our future needs - and at a cost past solutions simply can't match.

Northvolt 2022? Borlänge? ?? ?? ?? ?? ???? ???? ?? ?? 100GWh ?? ?? ?? ?? ???? ???? ?? 1,000?? ?? ???? ???? ... BMW? ?? ???? LFP? 24?? ?? ?? ???? ????SDI ...

Scania, the heavy truck manufacturer that is part of Volkswagen Group, and Northvolt say they have teamed up to create a battery for heavy-duty electric trucks that will last as long as the ...

This includes startup Northvolt's soon-to-be battery factory in the Northlands of Sweden. Advertisement "It's a revolution in some way, how Europe will compete with the rest of the world," he says. "Because Europe has missed the first and second train and now we need to catch the third train. ... "Having an LFP battery factory in ...

„Die validierte Zelle von Northvolt ist sicherer, kostengünstiger und nachhaltiger als herkömmliche Nickel-, Mangan- und Kobalt- (NMC) oder Eisenphosphat- (LFP) Chemikalien und wird mit Mineralien wie Eisen und Natrium hergestellt, die auf den Weltmärkten reichlich vorhanden sind“, so das Unternehmen in einer Mitteilung.

4 Mossburg met COO Liam O'Connor when they worked at Tesla together, then spent five years at Northvolt, as chief automation officer and eventually president for North America. ...

"What we can do is compete on price with LFP (lithium-iron batteries) from China. And we're using a supply

chain that's also something that already exists in Europe today," Enerpoly's \$8.4m grant brings the total raised to \$13.8m and gets them over the halfway line to build the factory, which has an estimated total cost of \$19m.

Northvolt is building nickel manganese cobalt (NMC) battery cells primarily because of its higher energy density than lithium iron phosphate (LFP), as well as its greater recycling value. The European industry is making ...

LFP batteries are rapidly becoming an important building block for the zero-emission society. ... Northvolt has just lost a supply contract with BMW worth \$2 billion because it has been unable to ...

Nov 18 - Embattled green tech player Northvolt has missed some in-house targets and has curtailed production at its battery cells plant in northern Sweden, according to internal company documents ...

Cell architecture. The new cell works in a comparable manner to a conventional lithium-ion cell, but with two significant changes in its build. Where today's lithium-ion cell features a graphite anode that stores lithium ions during a state of ...

Northvolt, por su parte, se ha adherido a la química de las baterías de níquel-manganeso-cobalto (NMC), la preferida por los clientes de vehículos eléctricos. La plataforma ESS de la empresa se basa en la misma química, que se considera menos sostenible que la LFP por su contenido en cobalto y níquel.

The Gdansk facility spans 25,000 square feet and finished construction in May this year, with production line validation set to conclude soon for customer deliveries to commence later in 2023. It received an EU grant last year. Northvolt's new debt funding was provided by the Investment Management Corporation of Ontario (IMCO), global asset manager ...

Northvolt möchte mit asiatischen Batteriefabrikanten wie CATL, BYD und LG konkurrieren, unter anderem durch den Bau einer Gigafabrik in Schleswig-Holstein. ... (NMC) oder Eisenphosphat (LFP), die jeweils Lithium enthalten. Aufgrund gleicher Energiedichten bei chinesischen Herstellern steigt der Kostendruck auf europäische Unternehmen. Dennoch ...

Northvolt's sodium-ion battery claims an energy density of 160 Wh/kg, which matches the LFP batteries commonly found in less expensive EVs, even if it does fall somewhat short of the 200 Wh/kg...

Das Unternehmen hat 2019 die Arbeiten an einer LFP-Batterie aufgenommen, mit dem Ziel, eine besonders nachhaltige und effiziente Zelle zu entwickeln. Der Investor EIT InnoEnergy ist im Bereich der Batterietechnologie nicht neu: EIT gehört auch zu den früheren Investoren bei dem schwedischen Unternehmen Northvolt und dem französischen Startup ...

The first step was Hydrovolt - a Northvolt-Hydro joint venture operating what is currently Europe's largest

battery recycling plant in the country that needs it soonest: electric vehicle frontrunner Norway. Entering commercial operations in May 2022, the Hydrovolt plant can handle 12,000 tons of battery packs per year - sufficient to ...

Le recyclage faisait partie de la vision de Northvolt depuis le début; D'autres technologies existent comme par exemple les LFP (lithium-fer-phosphate), mais leur niveau de recyclabilité est inférieur aux NMC (nickel-manganèse-cobalt), explique-t-elle. Le recyclage sera aussi un atout stratégique sur le plan économique : il ...

La batterie sodium-ion de Northvolt revendique une densité énergétique de 160 Wh/kg, ce qui correspond aux batteries LFP que l'on trouve couramment dans les VE moins chers, même si elle est un peu en deçà; des ...

"No cost-effective solution in sight" for LFP recycling September 12, 2024: Recycling of lithium iron phosphate batteries will continue to remain unprofitable -- at least in ...

Its sodium-ion technology has been validated at more than 160 Wh/kg at its R& D and industrialisation campus, Northvolt Labs, in Västerås, Sweden. This level of performance makes the technology competitive with today's dominant energy storage chemistry - lithium iron phosphate (LFP) batteries.

Es folgte aber ein Dementi: Laut CATL-Mitglieder Pan Jian ist ein Einstieg bei Northvolt „nicht unsere Priorität“. Update 17.12.2024: Nach der offiziellen Bekanntgabe der Werkspläne durch Stellantis und CATL liefert der Präsident der autonomen Gemeinschaft Aragonien, Jorge Azcon, einige weitere Details zu der geplanten LFP ...

Stockholm, Sweden - Northvolt today announced a state-of-the-art sodium-ion battery, developed for the expansion of cost-efficient and sustainable energy storage systems worldwide. The cell has been validated for a best-in-class energy density of over 160 watt-hours per kilogram at the company's R& D and industrialization campus, Northvolt Labs, in Västerås, Sweden.

Sodium ion cells, produced at scale, could be 20% to 30% cheaper than lithium ferro/iron-phosphate (LFP), the dominant stationary storage battery technology, primarily ...

Der Northvolt-Chef schätzt, dass bis 2030 möglicherweise eine Gesamtkapazität von 3000 GWh weltweit benötigt wird. Allein in Europa könnten dann mehr als 800, vielleicht 1000 GWh erforderlich sein. ... aber lizenziert von Tesla und resistente „europäische Fahrzeugmarken“ werden aus China samt LFP-Zellen importiert - so wird das sein ...

NCM batteries are more energy-dense than the cheaper alternative, LFP batteries. NCM's energy density enables vehicles to travel longer distances - a property that ...
