What are the advantages and disadvantages of flow batteries?

At present, the biggest advantage of flow batteries is the number of cycles, which can reach 15,000-20,000 cycles, far ahead of other energy storage technologies. However, flow batteries also have very obvious shortcomings, that is, the self-discharge rate is relatively high, resulting in relatively low efficiency.

Are lithium ion batteries better than flow batteries?

The goal is to clarify their unique characteristics and performance measures. Lithium-ion batteries demonstrate superior energy density (200 Wh/kg) and power density (500 W/kg) in comparison to Flow batteries (100 Wh/kg and 300 W/kg, respectively), indicating their ability to store more energy per unit mass and provide higher power outputs.

Are flow batteries safe?

The kWh cost of batteries (full life cycle) is now below 0.3 RMB/kWh. In terms of safety, flow batteries will not catch fire and explode like lithium batteries. On another level, flow batteries are not so safe, especially the most widely used all-vanadium flow batteries.
