

Could a cavern be China's first underground energy storage project?

A state-led consortium is developing a 300 MW/1200 MWh compressed air energy storage (CAES) project in Xinyang, Henan province, featuring an entirely artificial underground cavern--China's first of its kind.

Can compressed air energy storage be used in artificial caverns?

Compressed air energy storage in artificial caverns can mitigate the dependence on salt cavern and waste mines, as well as realize the rapid consumption of new energy and the "peak-cutting and valley-filling" of the power grid. At the same time, the safety and stability of the surrounding rock of gas storage has attracted extensive attention.

How do underground cavern reservoirs respond to charge/discharge cycles?

In the present work, the thermodynamic response of underground cavern reservoirs to charge/discharge cycles of compressed air energy storage (CAES) plants was studied. During a CAES plant operation, the cyclical air injection and withdrawal produce temperature and pressure fluctuations within the storage cavern.

What is compressed air energy storage (CAES)?

1. Introduction Compressed air energy storage (CAES) is a promising venue to supply peaking power to electric utilities. A CAES plant provides the advantage of compressing air during off peak hours to a relatively inexpensive underground reservoir, at the low cost of excess base-load electrical power.

Can a lined rock cavern be used for air storage?

Thus, an alternative method, CAES in lined rock caverns, is studied in the present paper and was found to have a better applicability. The earliest CAES using a lined rock cavern appeared in Japan in 1990. The researchers (Ishihata 1997) conducted an in situ air storage test in a coal mine at a depth of 450 m in Kamimasagawa City.

What are the solutions for temperature and pressure variations in storage caverns?

The solutions for the temperature and pressure variations within the storage cavern were developed for typical conditions of constant air mass flow rates during both the charge and discharge stages. It is also assumed that the air is cooled to a certain temperature prior to storage.

From ESS News. A state-led consortium is developing a 300 MW/1200 MWh compressed air energy storage (CAES) project in Xinyang, Henan province, featuring an entirely artificial underground cavern ...

A state-led consortium is developing a 300 MW/1200 MWh compressed air energy storage (CAES) project in Xinyang, Henan province, featuring an entirely artificial underground cavern--China's first of its kind.

: [(Compressed Air Energy Storage, CAES)1 , , ?? ...

Compressed air energy storage (CAES) is an effective solution for balancing this mismatch and therefore is suitable for use in future electrical systems to achieve a high penetration of renewable energy generation. ... It was then cooled to approximately the ambient temperature and stored in an underground cavern. During discharge, the air is ...

On May 26, 2022, the world's first nonsupplemental combustion compressed air energy storage power plant (Figure 1), Jintan Salt-cavern Compressed Air Energy Storage National Demonstration Project, was officially launched! At 10:00 AM, the plant was successfully connected to the grid and operated stably, marking the completion of the construction of the ...

Compressed air energy storage (CAES) is a large-scale energy storage technique that has become more popular in recent years. It entails the use of superfluous energy to drive compressors to compress air and store in underground storage and then pumping the compressed air out of underground storage to turbines for power generation when needed ...

Compressed air energy storage in artificial caverns can mitigate the dependence on salt cavern and waste mines, as well as realize the rapid consumption of new energy and the "peak-cutting and valley-filling" of the power grid. ... An analytical solution for mechanical responses induced by temperature and air pressure in a lined rock cavern ...

At present, the types of large-scale energy storage system in commercial operation have only pumped hydro energy storage (PHES) plants and compressed air energy storage (CAES) power plants. Mechanical energy storages, characterized by low energy storage density, is the basic property of PHES and CAES plants [3]. Alternatives are natural gas ...

At present, salt karst caverns are used as underground gas storage caverns in two commercial CAES power stations in the world, and gas sealing is realized by salt rock with low permeability (Crotofino et al., 2001). Although salt karst cavern is ideal for gas storage, this special geological structure has strict requirements on geological conditions and a relatively ...

The first hard rock shallow-lined underground CAES cavern in China has been excavated to conduct a thermodynamic process and heat exchange system for practice. The thermodynamic equations for the solid and ...

**Abstract:** The thermodynamic model of an underground artificial cavern in a 10 MW compressed air energy storage (CAES) system was developed with a simulation software. The boundary ...

**[Method]** Artificial underground cavern gas storage facilities largely freed compressed air energy storage power plants from the reliance on specific geological ...

With the demand for peak-shaving of renewable energy and the approach of carbon peaking and carbon neutrality goals, salt caverns are expected to play a more effective role in compressed air energy storage (CAES), large-scale hydrogen storage, and temporary carbon dioxide storage.

Calculation of air leakage rate in lined cavern for compressed air energy storage based on unsteady seepage process [J]. *Rock and Soil Mechanics*, 2021, 42(7): 1765-1773. *Rock and Soil Mechanics*, 2021, 42(7): 1765-1773.

Renewable energy becomes more and more important to sustainable development in energy industry [1]. Renewable energy has intermittent nature and thus requires large-scale energy storage as an energy buffer bank [2] pressed air energy storage (CAES) is one of large-scale energy storage technologies, which can provide a buffer bank between the usage ...

Hydrostor, the Canadian company that wants to store energy as compressed air in large balloon-like bags underwater, is now turning its attention to terra firma. Specifically, the company unveiled a ...

Compressed air energy storage (CAES) is a technology that uses compressed air to store surplus electricity generated from low power consumption t ... -Bin Zhao, Song-Hua Mei, Yu Zhou, Numerical simulation for the coupled thermo-mechanical performance of a lined rock cavern for underground compressed air energy storage, *Journal of Geophysics and ...*

Abstract: The thermodynamic model of an underground artificial cavern in a 10 MW compressed air energy storage (CAES) system was developed with a simulation software. The boundary conditions of charging and discharging physical processes for the CAES cycle of the underground artificial cavern were given according to a domestic CAES project.

A reasonable support could ensure the stability and tightness of underground caverns for compressed air energy storage (CAES). In this study, ultra-high performance concrete (UHPC) and high-temperature resistant polyethylene were used for structural support and tightness of caverns excavated in hard rock. Laboratory experiments were conducted to ...

Compressed air energy storage (CAES) is considered one of the critical technological approaches to bridging the gaps between clean electricity production and electricity demand. An in-situ air storage test in a shallow buried underground cavern was introduced to understand better the connection and mutual influence between aerothermodynamics and ...

Abstract: Compressed air energy storage (CAES) technology is a new type of physical energy storage and a kind of large-scale energy storage technology for power generation with broad development prospects. Large-scale CAES usually requires high-capacity underground gas storage devices. Among the existing types of underground compressed air storage reservoir, ...

In the present work, the thermodynamic response of underground cavern reservoirs to charge/discharge cycles of compressed air energy storage (CAES) plants was studied. ...

As the address types of underground gas storage, the existing compressed air energy storage projects or future ideas can be divided into the following four types: rock salt caves [15], artificially excavated hard rock caverns [16], abandoned mines and roadways [17], and aquifers [18]. Table 1 shows the underground energy storage projects in operation or planned ...

: ,(compressed air energy storage, CAES), ...

Air tightness and mechanical characteristics of polymeric seals in lined rock caverns(LRCs) for compressed air energy storage(CAES)#br# ZHOU Yu1,2,XIA Caichu1,3 ...

This paper presents an analytical approach for evaluating the mechanical response induced by temperature and air pressure in a lined rock cavern for underground compressed ...

Compressed air energy storage (CAES) is acknowledged to be the most pr... ... including underground cavern, artificial cavern, metal gas storage device and composite material gas storage device. The application of ...

During the operation period of the underground compressed air energy storage cavern, the three conservation equations of mass, momentum, and energy are satisfied, and the airflow inside the cavern is considered turbulent. Based on this, the transient flow of air inside the cavern can be described by the following equations. (1)

Understanding the research status at home and abroad, summarizing advanced experiences from other industries, and clarifying the challenges that need to be addressed ...

Compressed air energy storage (CAES) is one of the many energy storage options that can store electric energy in the form of potential energy (compressed air) and can be deployed near central power plants or distributioncenters. In response to demand, the stored energy can be discharged by expanding the stored air with a turboexpander generator.

Introduction Compressed air energy storage (CAES) is a technology for storing electrical energy on a large scale, only second to pumped storage in terms of scale. The gas storage device is an important component of CAES. The gas storage facilities of compressed air energy storage power plants that have been put into commercial operation domestically and ...

The long-term stability of a lined rock cavern (LRC) for underground compressed air energy storage is

investigated using a thermo-mechanical (TM) damage model. The numerical model is implemented in ...
