Cook Islands best loadshedding solutions

What makes the Cook Islands unique?

As a small island developing state, the Cook Islands has unique attributes that considerably enhance the benefits to be gained from renewable electricity. Located in the South Pacific Ocean, the Cook Islands is sandwiched between Tonga to the west, Kiribati to the north and French Polynesia to the east.

What changes will the Cook Islands make?

The changes will include management of power utilities, environmentally friendly and cost effective renewable electricity sources, and energy efficient strategies. The Cook Islands will be careful in its selection of renewable electricity options and will not entertain unproven or non-commercial technologies.

How will new energy technologies affect the Cook Islands?

In future,new energy technologies such as marine energy may offer new opportunities for the Cook Islands to generate electricity from other renewable sources. Developments in energy storage or in energy efficiency may also further reduce the Cook Islands' reliance on diesel. The Cook Islands prefers to use proven and economic energy technologies.

What is infrastructure Cook Islands?

Infrastructure Cook Islands houses planning functionsunder the Projects and Implementation Division and a National Hydrography and Geoscience Division. Geoscience (Mapping and Data)

Why is pricing important in the Cook Islands?

Pricing is a key tool for influencing consumer behaviour. An appropriate price needs to be set that encourages energy efficient behaviour and reduces the costs to the Government, whilst also achieving its vision of reducing the costs of living and business for residents and attracting Cook Islands people to live and invest in their homeland.

Can a partner help the Cook Islands achieve its targets?

The Cook Islands is looking for partners who can help achieve its targetsthrough funding the conversion of one or more of the islands from diesel generation to renewable energy. We acknowledge the support we have already received from our partners.

Predictive Load Shedding calculates the minimum required MW to be shed for each subsystem according to the type and location of the disturbance, actual operating generation, spin reserve, loading, configuration, load distribution, and priority. Predictive Load Shedding then selects the best combination of loads that will satisfy this requirement.

Between November 2022 and March 2023, South African businesses and households have experienced some form of load shedding every working day, and as a result, on February 09 2023, the South African President,
