

How will new energy technologies affect the Cook Islands?

In future, new energy technologies such as marine energy may offer new opportunities for the Cook Islands to generate electricity from other renewable sources. Developments in energy storage or in energy efficiency may also further reduce the Cook Islands' reliance on diesel. The Cook Islands prefers to use proven and economic energy technologies.

Can solar power save the Cook Islands?

It will construct new solar photovoltaic power plants on up to six islands of Cook Islands' southern group. The project will result in annual savings of 1.09 million liters of diesel consumption and annual reduction of 2,930 tons of carbon dioxide emission, for greater energy security and sustainability in the Cook Islands.

Can a partner help the Cook Islands achieve its targets?

The Cook Islands is looking for partners who can help achieve its targets through funding the conversion of one or more of the islands from diesel generation to renewable energy. We acknowledge the support we have already received from our partners.

What changes will the Cook Islands make?

The changes will include management of power utilities, environmentally friendly and cost effective renewable electricity sources, and energy efficient strategies. The Cook Islands will be careful in its selection of renewable electricity options and will not entertain unproven or non-commercial technologies.

Will the Cook Islands use renewable electricity?

The Cook Islands will be careful in its selection of renewable electricity options and will not entertain unproven or non-commercial technologies. The attached Summary Table provides some indicative and preliminary information on the types and costs of the renewable electricity technologies we are considering.

What sectors rely on imported energy in the Cook Islands?

There are three main sectors dependent on imported energy in the Cook Islands; these include transport, electricity and aviation. Of the total number of imported fuels into the country, 43% is used by transport; 30% by aviation and 27% by electricity.
