

Is coal still a key energy source in the Czech Republic?

As the country's only domestic fossil fuel, coal has been and still is a key energy source in the Czech Republic. In 2019, it accounted for one-third of total energy supply, 46% of electricity generation and over 25% of residential heating.

How is energy used in Czechia?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Can the Czech Republic retrain coal miners and power plant workers?

The Czech Republic is hence well placed to leverage the funding to be provided under the European Just Transition Fund, which can be used, among others, to retrain coal miners and power plant workers. The Czech Republic has progressed notably in terms of energy efficiency measures since the IEA's last in-depth review in 2016.

How much energy does the Czech Republic emit per capita?

The EU average was 7.9 tons per capita. Czech Republic's emissions were comparable to those of Japan or the Netherlands. In 2023, the city of Brno is working to modernise its heat generation and distribution infrastructure.

Will the Czech Republic be able to invest in green energy?

In the period to 2030, the Czech Republic will have access to various EU funding schemes intended for green investments. Combined with technical and implementation advice, those funds may help increase investments in energy efficiency, renewable energies and in best available technologies in the industry sector.

Czechia approved a new National Energy Policy (SEP) aiming to reduce energy consumption and improve the economy's energy intensity. However, reaching the targets of the SEP will require ...
