Even “super caps” are cute compared to the energy storage of electrochemical cells, and that is adorable when compared to the chemical potential energy of petrol. Basically capacitors right next to your inverter will help reduce AC ripple current on the batteries (ie from the PWM) but it won't give you any significant energy storage for driving.

A: Capacitors themselves do not produce AC or DC. They store and release energy in the form of an electric field when connected to an external voltage source, which can be either AC or DC. Q: Can capacitor power a car? A: Capacitors alone cannot power a car, as they have lower energy density compared to batteries and discharge their energy rapidly.
