Can storage facilities transform the power generation sector?

The study highlights the crucial role of storage facilities in transforming the power generation sector by shifting toward renewable sources of energy. As such, the study emphasizes the importance of effective regulatory frameworks in enabling the deployment of BESS, particularly in insular energy systems.

Why is energy storage a problem?

The lack of direct support for energy storage from governments, the non-announcement of confirmed needs for storage through official government sources, and the existence of incomplete and unclear processes in licensing also hurt attracting investors in the field of storage (Ugarte et al.).

Is energy storage keeping pace?

Although the energy transition is in full swing, energy storage challenges remain unmet and technology is advancing more slowly in this field. Where energy generation from renewable sources is growing, energy storage is not keeping pace. But what is the point of generating energy cheaply when we cannot store it for use at peak demand?

Why is non-acceptance of energy storage systems a problem?

Non-acceptance of EES systems by the industry can be a significant obstacle to the development and prevalence of the utilization of these systems. To generate investment in energy storage systems, extensive cooperation between facility and technology owners, utilities, investors, project developers, and insurers is required.
