What is solar storage and how does it work?

Solar storage is a system that stores excess electricity produced by solar panels for later use. It works by converting the excess electricity into a form that can be stored, such as chemical energy in batteries. This stored energy can then be used whenever needed, including after the sun has set, acting as an insurance policy for sunshine.

Concentration Photovoltaics. Concentration PV, also known as CPV, focuses sunlight onto a solar cell by using a mirror or lens. By focusing sunlight onto a small area, less PV material is required. PV materials become more efficient as the light becomes more concentrated, so the highest overall efficiencies are obtained with CPV cells and modules.
