1. Energy Storage Systems Handbook for Energy Storage Systems 3 1.2 Types of ESS Technologies 1.3 Characteristics of ESS ESS technologies can be classified into five categories based on the form in which energy is stored. ESS is defined by two key characteristics - power capacity in Watt and storage capacity in Watt-hour.

The worldwide energy storage reliance on various energy storage technologies is shown in Fig. 1.9, where nearly half of the storage techniques are seen to be based on thermal systems (both sensible and latent, around 45%), and around third of the energy is stored in electrochemical devices (batteries).

As America moves closer to a clean energy future, energy from intermittent sources like wind and solar must be stored for use when the wind isn"t blowing and the sun isn"t shining. The Energy Department is working to develop new storage technologies to tackle this challenge -- from supporting research on battery storage at the National Labs, to making investments that ...
