

What are El Salvador's green energy ambitions?

El Salvador's Green Energy Ambitions: 95% Renewable Projects Set to Transform the Nation in 2024. - El Salvador in English El Salvador's Green Energy Ambitions: 95% Renewable Projects Set to Transform the Nation in 2024.

Can public institutions support renewable projects in El Salvador?

While the low costs of finance from public institutions can certainly have a positive impact on the capital mix of renewable projects, limitations on the availability of such instruments must also take account of the volumes needed to realise El Salvador's long-term deployment ambitions for renewables.

How can El Salvador benefit from regional energy integration?

The plan should also consider the integration of renewable energy technologies for end uses in buildings, heat and transport, while establishing clear targets that contribute to the ongoing scale-up of renewables. El Salvador benefited greatly from regional energy integration and plays an active role in the MER.

What is the energy supply in El Salvador?

In 2019, total energy supply in El Salvador reached around 156 600 TJ (see Figure 5). That year, the renewable energy source with the largest share as part of the primary energy supply was bioenergy (19.6%), followed by hydropower (3.5%), geothermal energy (3.4%), and solar energy (1.1%) (CNE, 2020).

Does El Salvador have a target for renewables in end-use sectors?

El Salvador does not currently have targets for renewables in end-use sectors, either. Establishing targets for renewable energy in transport, heating and cooling, agriculture and industry could contribute to a further scale-up of renewables in the country, and help achieve emissions reduction targets while creating new business opportunities.

What is El Salvador's new energy policy 2020-2050?

The new National Energy Policy 2020-2050 aims to diversify El Salvador's energy mix and take advantage of the country's significant renewable energy resource potential. At the same time, the policy highlights the need to reduce dependence on fossil fuels and mitigate the impact of climate change.
