

Does Fiji have an electric vehicle fleet?

Household electrical infrastructure in Fiji is not currently equipped to support a modern, networked electric vehicle fleet. Most have a 20 Amp single phase connection, therefore any household adopting an EV will be restricted to using a slow charger overnight for 8+hours in order to charge enough for significant daily commuting distances.

How many EV fast chargers are installed in Fiji?

Based on the installation trend of EV public fast chargers in nearby NZ, Fiji can anticipate approximately one fast charger installed per 26 EVs. Taking the total fleet size (all vehicle classes), cumulative investment cost (simple terms) can be calculated for the three timeframes in each scenario.

Does Fiji adopt EV charging standards?

In almost all cases, and particularly for prescribed electrical work, Fiji has adopted the Australia/New Zealand standards as their own (AS/NZS)15. It can be assumed that Fiji will continue this practice with the adoption of any EV Charger related standards or supplementary notes.

Which EV is used in light vehicle modelling in Fiji?

The Nissan Leaf is used as the representative EV in the light vehicle modelling in this study. In almost all cases, and particularly for prescribed electrical work, Fiji has adopted the Australia/New Zealand standards as their own (AS/NZS)15.

Why is Tourism Fiji introducing electric vehicles?
