

Will Djibouti be the first country to produce 100% green energy?

In its bid to become the first country on the continent to produce 100% green energy by 2035, Djibouti can also draw on other ambitious projects. These include the solar power project in the Grand Bara desert, for which work began in 2020.

How can Djibouti help reduce poverty?

Djibouti can help reduce poverty by harnessing energy from renewable sources without depleting its forests or relying on imported coal or oil. By becoming the first African country to use 100 percent renewable energy, Djibouti has the opportunity to become a leading international voice in sustainable development.

Will Djibouti be self-sufficient in energy production in 2035?

In December 2023, the Republic of Djibouti signed up to the African Green Hydrogen Alliance. The country's formidable prospects in terms of renewable energy means that Slim Feriani can look to the future with confidence. "The objective for 2035 is to be self-sufficient in energy production," he says. "We should get there before then."

How is Djibouti reducing its dependence on imported power?

Djibouti is also working to reduce its dependence on imported power by investing in domestic production and diversifying its energy mix. The government has ambitious plans to become the first country in Africa to fulfil 100% of its electricity demand from clean energy sources while also extending the power grid to reach 100% of the population.

What is the source of Djibouti's energy?

Approximately 65 percent of Djibouti's electricity comes from external sources. The remaining energy comes from its own geothermal, solar, wind, and biomass sources. According to the International Renewable Energy Agency (IRENA), this reliance on imported energy can lead to price volatility that can hinder economic development plans.

What is Djibouti known for?

Djibouti is known for its abundant renewable energy resources. It has the natural capacity to produce 300 megawatts of renewable energy annually--triple what it produces today. The country has abundant solar radiation for the creation of solar farms and many opportunities to harvest geothermal energy, such as the rifts of its two largest lakes, Abbe and Assal.

Djibouti: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all ...

In Energy Saving opera un gruppo di lavoro eterogeneo, costituito da figure con background professionali
