Will 2024 be a good year for battery energy storage?

Among many things, 2024 will probably remain a marker for the momentum built up for Battery Energy Storage Systems (BESS). So sharp has been the pick up here that even countries like the UK which had special focus on Pumped Hydro Storage (PSP) have changed rules in recent weeks to allow BESS projects to fill key energy storage needs.

What if batteries can be reused?

Meng pointed out that if batteries can be freely reused with multiple applications, their economics suddenly become orders of magnitude more attractive: "If we can make batteries last 10 times longer, storage costs fall by a factor of 10. The way to achieve that is ultralong life."

Are zinc-air batteries a good alternative to lithium-ion batteries?

Zinc-air batteries are emerging as a promising alternative in the energy storage field due to their high energy density, cost-effectiveness, and environmental benefits. They have an energy density of up to 400 Wh/kg, rivaling lithium-ion batteries. How do they work?
