Rechargeable Zn batteries (RZBs) hold great practicability for cost-effective sustainable energy storage because of the merits of Zn including abundant natural supply of raw materials, cost efficiency, low toxicity, and high theoretical capacity (820 mAh g<sup>-1</sup> and 5855 mAh cm<sup>-3</sup>) [1], [2], [3] addition, RZBs normally using aqueous electrolytes feature intrinsic ...

Zinc-ion batteries (ZIBs) have garnered significant attention in the field of energy storage and conversion due to their advantages, including high theoretical specific capacity (820 mAh/g) and low potential (-0.762 V vs. SHE, standard hydrogen electrode) [1], [2], [3], [4]. However, zinc anodes [5] have been facing challenges like dendritic formation, hydrogen ...

In this work, we report remarkable improvements on Zn reversibility in a non-concentrated aqueous zinc trifluoromethanesulfonate (Zn(OTF)<sub>2</sub>) electrolyte by using 1,2-dimethoxyethane (DME) additive to reshape the electrolyte structure and Zn interface chemistry. The formulated recipe with 40 vol.% DME (denoted as DME40) features ...

With the growing demands for low-carbon emissions, renewable energy sources, such as solar and wind, have received tremendous attention. In this respect, low-cost and high-efficiency energy storage systems (ESSs) are urgently required, since renewable energy sources are usually intermittent [1, 2]. Although lithium-ion batteries (LIBs) have achieved great success ...
