What are the characteristics of a storage system?

The main characteristic of storage systems on which the selection criteria are based are the following. Storage Capacity This is the quantity of available energy in the storage system after charging. Discharge is often incomplete.

What is storage capacity?

Storage Capacity This is the quantity of available energy in the storage system after charging. Discharge is often incomplete. For this reason, it is defined on the basis of total energy stored, W_{st} (Wh), which is superior to that actually retrieved (operational), noted W_{ut} (Wh).

How does the energy capacity guarantee work?

Shifting the peak demand by charging during off-peak times and discharging during the peak times. Reduction of peak demand and reduction in electricity bill. The Energy Capacity Guarantee gives maximum acceptable reduction in system energy capacity as a function of time and as a function of system usage.
