One of the most important and wide range of applications for rare earth (REs) containing materials is the production of permanent magnets. Since the 1960s, this class of magnets has given designers and engineers the ability to increase performance, reduce the size of devices and even create applications that would not be possible with other magnet materials.

Samarium cobalt magnets are rare-earth magnets which, apart from samarium and cobalt, may also contain zirconium and iron. They are often classified into two categories, SmCo 5 and Sm 2 Co 17, which are referred to as 1:5 and 2:17 [39]. It is estimated that about 5% of the total trade of rare-earth magnets belong to the samarium cobalt family [37].
