Due to the strong effect of microgrid inertia on the microgrid frequency response and stability, the integration of low or non-existing inertia renewable energy resources requires additional research effort [9]. A lot of research are being done to figure out how to solve this problem while considering the system's cost and complexity.

In contrast, advanced energy storage systems are ideally suited for providing frequency regulation services. Since the ACE represents the short-term fluctuations in supply and demand, it is by-and-large energy neutral--over a measureable amount of time, an asset providing regulation service neither generates nor consumes energy.
