

What is a solar energy fan?

The solar energy fan is a product designed to solve the overheating of the solar energy system. When the solar energy system has seasonal overheating conditions, the solar energy fan will be used as the energy-consuming equipment of the system to consume the excess heat in the solar water heating system. Ensure the normal operation of the system.

What is the relationship between the energy of a fan?

The energy of a fan is related to: pressure and air movement (flow). This relationship is called the 'fan curve.' The fan curve for each type of fan has a unique shape.

What is the working principle of a fan?

The working principle of a fan involves the application of voltage to the stator winding, which generates a pulsating type flux. There are two fluxes: one rotating in a clockwise direction and the other in a counter-clockwise direction. The motor rotates in the resultant direction. Your fan, being ten years old, operates based on this principle.

Why should a solar fan be installed in a building?

It can not only solve the problem of system overheating, but also replace the building with fresh air and improve the air quality in the living and working environment. The solar fan is a heat dissipation element of the solar system, and it is also a ventilation element of the building.

What happens when a solar fan is heated?

After the air is heated, the volume expands and the density decreases, and the air starts to flow upwards, causing the pressure around the coil to decrease (compared to indoors). Under the action of the pressure difference, the indoor air starts to flow outwards, so that the solar fan can play the role of replacing the indoor fresh air.

Can a solar fan reduce the overheating phenomenon of solar water heating?

Abstract: This article introduces a solar fan device, which can alleviate the overheating phenomenon of solar water heating system, and can be installed on the building as a component of the building, which can ventilate the building and improve the air quality of the building. introduced its design principle and structure.
