

Why did Gem move its equipment?

To protect the health of employees and ensure the continuity of such a vital activity, it was decided to relocate the equipment. "GEM imports 50% of the gas consumed in France, for individuals, companies, industries and certain essential public services such as hospitals.

What are the main sources of energy in France?

Energy in France was generated from five primary sources: nuclear power, natural gas, liquid fuels, renewables and coal. In 2020, nuclear power made up the largest portion of electricity generation, at around 78%. Coal energy is declining and due to cease. Renewables accounted for 19.1% of energy consumption in 2020.

What if GEM stopped working?

"GEM imports 50% of the gas consumed in France, for individuals, companies, industries and certain essential public services such as hospitals. If we stopped working, the gas would no longer be delivered," explains Edouard Vuatrin, head of gas commercial dispatching at Global Energy Management.

How much energy does France need?

France has 20 GW of installed capacity and supplies around 10% of France's electricity needs. Wind farm in France. Renewable energy includes wind, solar, biomass and geothermal energy sources. In 2009 a target for 2020 was set of 23% of all energy used would be renewable energy, this was not met as only 19.1% was achieved.
