In this paper,based on a fault analysis of 220 kV GIS disconnecter and the test data of other similar equipment,the mechanical characteristics of this type of GIS disconnecter are studied in depth.

Reaction torques of two motors are neutralized together, and the torque of the third motor, which is mounted on a servo motor, is used to maintain the drone balance [5]. In Fig. 26, the flight mechanisms of tri-rotors are shown [98]. The motors of tri-rotor UASs, similar to other VTOLs, have the same speeds during takeoff and

landing.
