

As global energy consumption accelerates at an alarming rate, the development of clean and renewable energy conversion and storage systems has become more important than ever. Although the efficiency of energy ...

Due to strong van der Waals interactions, graphene nanosheets stack together, resulting in inefficient charge storage, which significantly compromises their performance as ...

The key objective of the in situ growth method is to create graphene/MOF composites with the shape of graphene matrix by using it as a template, directly soaking it in the precursor solution that inducing MOFs growth on its surface and internal pores [34] using in-situ approach Karanikolos G N et al., fabricated Cu-BTC/GO hybrid nanocomposite for H<sub>2</sub> ...

Exemplified by graphene, MXene, MoS<sub>2</sub>, and covalent organic frameworks (COFs) etc., 2D nanomaterials represent promising candidates for flexible energy storage electrodes owing to their remarkable attributes including high surface area, fast charge transport, and tunable properties through scalable fabrication techniques.

Due to the synergistic effect of heteroatom-enriched RTh-COP and conductive graphene layers, the resulting RTh-COP-EGR nanohybrid exhibits a capacitance of 4.2 mF ...

The recent outbreak of graphene in the field of electrochemical energy storage has spurred research into its applications in novel systems such as magnesium-ion batteries ...

Driving towards sustainable energy solutions: harnessing metal-organic framework/graphene oxide composites to propel high-efficiency smart supercapacitors. Download: Download high-res image (387KB) ... Energy storage plays a crucial role in ensuring a continuous and reliable supply of renewable energy to power systems, even during periods of ...

Composites of a Ni-doped metal organic framework (MOF) with reduced graphene oxide (rGO) are synthesized in bulk (gram scale) quantities. The composites are composed of rGO sheets, which avoid restacking from ...

Due to their unique properties, together with their ease of synthesis and functionalization, graphene-based materials have been showing great potential in energy storage and conversion. These hybrid structures display excellent ...

Pristine organic phase change materials (PCMs) are difficult to complete photothermal conversion and

storage. To upgrade their photothermal conversion and storage capacity, we developed Fe-MOF (metal-organic framework) derived  $\text{Fe}_3\text{O}_4/\text{C}$ -decorated graphene (GP) based composite PCMs toward solar energy harvesting. Graphene is an ...

The experimental measured results showed the latent heat thermal energy storage capacity of the graphene@MEPCM (232.8 J/g) was slightly higher than that of pure PCM (227.6 J/g). ... proving that Young's modulus and Yield limit of MEPCM with graphene/organic hybrid structure shell are significantly improved compared with the MEPCM without ...

Three-dimensional graphene (3DG)/metal-organic framework (MOF)-based composites have attracted more and more attention in the field of energy due to their unique hierarchical porous structure and properties. The combination of graphene with MOFs can not only effectively overcome the limitations of poor electrical conductivity and low ...

Three-dimensional graphene/metal-organic framework composites for electrochemical energy storage and conversion. Chemical Communications 2023, 59 (43), ...

This review outlines recent studies, developments and the current advancement of graphene oxide-based LIBs, including preparation of graphene oxide and utilization in LIBs, ...

Here, a focused, concise review on the synthesis of EFGs is presented, along with their 2D covalent organic polymer (2D COP) analogues, as energy materials. The versatility of edge-functionalization is revealed for ...

Energy storage options that can easily connect with the small, flexible designs of wearable devices which range from fitness trackers to smart clothing are becoming more and more common. The potential use of graphene-based organic frameworks in supercapacitors to enhance the capabilities of flexible energy storage is considerable.

Applications of metal-organic framework-graphene composite materials in electrochemical energy storage. Author links open overlay panel Mengyao Zhang a ... [88], [89], [90], very large energy storage, high specific energy, long cycling life, and good environmental compatibility [91], [92]. LIBs are widely applied in many energy storage ...

Phase change materials (PCMs) are a class of energy storage materials with a high potential for many advanced industrial and residential applications [[1], [2], [3], [4]]. These smart energy management systems can store energy in the form of melting-solidifying latent heat, and release the stored energy without almost any energy drop [5, 6]. Although recent progresses in ...

The New Direction for Graphene in Supercapacitor Applications . While the South Korean research has rekindled notions that graphene could be the solution to increasing the storage capacity of supercapacitors to the point where they ...

This review explores the increasing demand of graphene for electrochemical energy storage devices (as shown in Fig. 1), and mainly focuses on the latest advances in the use of graphene in LIBs, Sodium-ion (Na-ion) batteries ... It is reported that many organic solvents such as N-methyl-2-pyrrolidone (NMP) can be used to disperse graphene for ...

This paper gives a comprehensive review of the recent progress on electrochemical energy storage devices using graphene oxide (GO). GO, a single sheet of graphite oxide, is a functionalised graphene, carrying many oxygen-containing groups. This endows GO with various unique features for versatile applications in batteries, capacitors and fuel ...

Metal-organic frameworks (MOFs) are one of the most advanced crystal materials assembled by organic ligands as linkers and metal ions as center ions, which can be used as excellent materials for batteries and supercapacitors due to their high adjustable pore sizes, controllable structures, and specific surface areas. Carbon-based functional materials (e.g., ...

In situ growth of Ni-Co layered double hydroxides on graphene nanosheets by virtue of metal-organic framework as a sacrifice template is reported, which yields hollow nanocages uniformly deposited on graphene nanosheets. The strong ...

Organic PCMs such as paraffin wax (PW), alcohols, fatty acids, esters, and polymer materials have high latent heat capacity, little or no supercooling, and are non-corrosive, but they have low intrinsic thermal conductivity. ... In addition, depending on how graphene and its derivatives affect the crystallinity of PCMs, the energy storage ...

These features have made graphene become a preferred material in energy storage devices, such as lithium-ion batteries, electrical double-layer capacitors, and dye-sensitized solar cells. Graphene is one of the promising electrode ingredients improving the performance of an energy storage device.

Graphene, a fascinating two-dimensional (2D) carbon nanosheet with a conjugated hexagonal lattice, has drawn great interest in energy storage and conversion fields due to its huge theoretical surface area, superior electrical ...

Due to strong van der Waals interactions, graphene nanosheets stack together, resulting in inefficient charge storage, which significantly compromises their performance as electrodes in supercapacitors. Herein, we design a hybrid material by interacting covalent organic frameworks (COFs) into reduced graphene oxide (rGO) films or fibers. The 2D COF ...

Organic rechargeable batteries have emerged as a promising alternative for sustainable energy storage as they exploit transition-metal-free active materials, namely redox-active organic materials ...

Graphene oxide (GO), a single sheet of graphite oxide, has shown its potential applications in electrochemical energy storage and conversion devices as a result of its remarkable properties, such as large surface area, ...

Graphene has now enabled the development of faster and more powerful batteries and supercapacitors. In this Review, we discuss the current status of graphene in energy storage, highlight ongoing ...

Due to the intermittent nature of solar energy, researchers and scientists are working to develop thermal energy storage (TES) systems for effective utilization of solar energy. Phase change materials (PCMs) are ...

Graphene-based membranes have been explored in different energy and environmental applications. The 2D nanochannel structure and low frictional water flow inside micrometer-thick graphene oxide (GO) laminates make them attractive candidates for large-scale energy storage systems. ... Regarding potentially green and cost-efficient energy storage ...
