(r.1) "energy storage facility" has the meaning given to it in the Hydro and Electric Energy Act; (r.2) "energy storage resource" means the component of an energy storage facility that uses a technology or process that is capable of using electric energy as an input, storing the energy for a period of time and then

Introduction. Grid energy storage is a collection of methods used to store energy on a large scale within an electricity grid. Electrical energy is stored at times when electricity is plentiful and cheap (especially from variable renewable energy sources such as wind and solar), or when demand is low, and later returned to the grid when demand is high and electricity prices tend to be higher.
