Hidden concerns about energy storage

Following a lithium-ion battery fire at the Moss Landing plant in Monterey County in California, communities nationwide are expressing concerns about hosting similar plants.

In the context of the grand strategy of carbon peak and carbon neutrality, the energy crisis and greenhouse effect caused by the massive consumption of limited non-renewable fossil fuels have accelerated the development and application of sustainable energy technologies [1], [2], [3]. However, renewable and clean energy (such as solar, wind, etc.) suffers from the ...

The limitations of batteries pose another hidden cost of green energy. Batteries used in electric vehicles (EVs) and grid storage degrade over time, necessitating periodic replacement.
