

How the energy storage business will develop

Is energy storage a new business opportunity?

With the rise of intermittent renewables, energy storage is needed to maintain balance between demand and supply. With a changing role for storage in the energy system, new business opportunities for energy storage will arise and players are preparing to seize these new business opportunities.

How will storage solutions impact the energy industry?

Storage solutions will create new connections between power generation and energy users, and between producing/consuming players ('prosumers') as well. Trading and arbitrage over time will create new business opportunities for the existing and new players in the energy field. However, we are not there yet.

Are there any gaps in energy storage technologies?

Even though several reviews of energy storage technologies have been published, there are still some gaps that need to be filled, including: a) the development of energy storage in China; b) role of energy storage in different application scenarios of the power system; c) analysis and discussion on the business model of energy storage in China.

When will energy storage be commercialized?

From 2016 to 2020, the goal is to build energy storage demonstration projects with commercial purposes. This marks the development of energy storage into the early stages of commercialization. During this period, the management system, incentive policies and business models of energy storage were mainly explored.

What is the future of energy storage?

The future of energy storage is promising, with continual advancements in efficiency, scalability, and cost-effectiveness. Technologies like solid-state batteries, flow batteries, and hydrogen storage are expected to play key roles in transforming the energy grid and advancing the global shift to renewable energy.

How is energy storage developing in China?

However, China's energy storage is developing rapidly. The government requires that some new units must be equipped with energy storage systems. The concept of shared energy storage has been applied in China, which effectively promotes the development of energy storage.
