Can solar energy be combined with solar photovoltaic?

The AES Lawai Solar Project in Kauai, Hawaii demonstrates that solar photovoltaic systems can be combined with energy storage. It has a 100 megawatt-hour battery energy storage system paired with a solar PV system. Coupling solar energy and storage technologies is beneficial because solar energy is not always produced at the time energy is needed most.

Where can energy storage be placed?

Sometimes energy storage is co-located with, or placed next to, a solar energy system, and sometimes the storage system stands alone, but in either configuration, it can help more effectively integrate solar into the energy landscape.

Why is combining solar energy and storage beneficial?

The reason solar energy and storage technologies should be coupled is that solar energy is not always produced at the time energy is needed most. The AES Lawai Solar Project in Kauai, Hawaii demonstrates this, with a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system.
