Neither clear nor convincing business models have been developed. The lessons from twelve case studies on energy storage business models give a glimpse of the future and show what players can do today.

What is a business model for storage?

We propose to characterize a "business model" for storage by three parameters: the application of a storage facility, the market role of a potential investor, and the revenue stream obtained from its operation (Massa et al., 2017).

Is energy storage a new business opportunity?

With the rise of intermittent renewables, energy storage is needed to maintain balance between demand and supply. With a changing role for storage in the energy system, new business opportunities for energy storage will arise and players are preparing to seize these new business opportunities.

What are the business models for large energy storage systems?

The business models for large energy storage systems like PHS and CAES are changing. Their role is traditionally to support the energy system, where large amounts of baseload capacity cannot deliver enough flexibility to respond to changes in demand during the day.

Can energy storage disrupt business models?

Energy storage has the potential to disrupt business models. Energy storage has been around for a long time. Alessandro Volta invented the battery in 1800. Even earlier, in 1749, Benjamin Franklin had conducted the first experiments. And the first pumped hydro storage facilities (PHS) were built in Italy and Switzerland in 1890.
