The hydraulic energy storage system enables the wind turbineto have the ability to quickly adjust the output power, effectively suppress the medium- and high-frequency components of wind power fluctuation, reduce the disturbance of the generator to the grid frequency, and improve the power quality of the generator.

What is the role of energy storage systems in hydraulic wind turbine generators?

For the role of energy storage systems in hydraulic wind turbine generators, the following aspects can be summarized. Hydraulic accumulators play a significant role in solving the 'fluctuation' of wind energy. It mainly specializes in a steady system speed, optimal power tracking, power smoothing, and frequency modulation of the power systems.

How is energy stored in a hydraulic system?

The energy in the system is stored in (E) hydraulically or pneumatically and extracted from (E) when necessary. Since hydraulic pumps/motors tend to have a higher power density than pneumatic compressors/expanders, the hydraulic path is usually used for high-power transient events, such as gusts or a sudden power demand.

What energy storage technology is used in hydraulic wind power?

This article mainly reviews the energy storage technology used in hydraulic wind power and summarizes the energy transmission and reuse principles of hydraulic accumulators, compressed air energy storage and flywheel energy storage technologies, combined with hydraulic wind turbines.

Can energy storage be used in hydraulic wind power?

On one hand, introducing the energy storage system into hydraulic wind powersolves the problems caused by the randomness and volatility of wind energy on achieving the unit's own functions, such as speed control, power tracking control, power smoothing, and frequency modulation control.

How can a gravity hydraulic energy storage system be improved?

For a gravity hydraulic energy storage system, the energy storage density is low and can be improved using CAES technology. As shown in Fig. 25, Berrada et al. introduced CAES equipment into a gravity hydraulic energy storage system and proposed a GCAHPTS system.
