

Are battery-powered generators better than gas-fed generators?

Gone are the days where getting power where there is none means firing up a gas-powered generator. Sure, that is still an option-- and for bigger needs, like whole home power, that may be the better option-- but modern, battery-powered stations offer a lot of versatility that gas-fed models lack. For instance, they are quieter.

Why should you buy a home generator?

Home generators provide peace of mind that should you experience an outage, you can still operate your essential devices, including home appliances. However, home generator models vary depending on their type, power level, and power source, and finding the right one for your specific needs can depend on your living situation.

How do I safely use my home generator?

Here are some critical steps you should take to ensure that you're using your home generator safely: Don't operate a gas generator in an enclosed area, such as a garage or shed, as this can lead to carbon monoxide buildup. Use a fuel stabilizer when you're storing gasoline for an extended period of time, as destabilized gas can be a fire hazard.

Can a traditional generator have a high THD?

Traditional generators can have a THD higher than 20%. THD is not a spec that generator manufacturers typically list, especially for traditional generators, so it's difficult to know what you're getting, but low THD is always a safe bet with inverter generators.

With the Anker SOLIX 522 lifepo4 power station, you can enjoy up to 10 years of reliable power supply. Whether you're camping in the wilderness or facing a power outage at home, this eco-friendly battery powered Anker generator ensures you're never left in the dark.
