

How much electricity does Iceland use?

In 2015, the total electricity consumption in Iceland was 18,798 GWh. Renewable energy provided almost 100% of production, with 75% coming from hydropower and 24% from geothermal power. Only two islands, Grímsey and Flatey, are not connected to the national grid and so rely primarily on diesel generators for electricity.

What is the energy supply in Iceland?

In terms of total energy supply, 85% of the total primary energy supply in Iceland is derived from domestically produced renewable energy sources. Geothermal energy provided about 65% of primary energy in 2016, the share of hydropower was 20%, and the share of fossil fuels (mainly oil products for the transport sector) was 15%.

What percentage of Iceland's energy is renewable?

About 85% of the total primary energy supply in Iceland is derived from domestically produced renewable energy sources. This is the highest share of renewable energy in any national total energy budget.

Can Iceland Export energy to the UK?

This would allow Iceland to export excess energy to UK and in turn linking it to a wider European super grid. The project is in planning stages and is controversial in Iceland due to fears of increased domestic electricity prices as well as environmental damage from the resulting increase in power plants.

What percentage of Iceland's houses are heated with geothermal energy?

About 85% of all houses in Iceland are heated with geothermal energy. In 2015, the total electricity consumption in Iceland was 18,798 GWh. Renewable energy provided almost 100% of electricity production, with about 73% coming from hydropower and 27% from geothermal power.

When did Iceland start using hydrogen as a fuel source?

Professor Bragi Ánason first proposed the idea of using hydrogen as a fuel source in Iceland during the 1970s when the oil crisis occurred. The idea was considered untenable, but in 1999 Icelandic New Energy was established to govern the transition of Iceland to the first hydrogen society by 2050.
