Can fuzzy logic control a hydraulic gravity energy storage system?

Relying on the review and to the best of our knowledge, the development of a Fuzzy logic control for the hydraulic gravity energy storage system (HGESS) has never been documented in the literature. Moreover, the investigation of the best combination of system dimensions using Fuzzy logic is a novel contribution.

How to dimension gravity energy storage system?

A novel approach for dimensioning gravity energy storage system is implemented. Fuzzy logic controller is developed for considering the input power uncertainty. Centroid defuzzification and Gaussian membership function are the most suitable. Design dimensions are identified for the large, medium, and small power plants.

How MATLAB-Simulink simulates a physical energy storage system?

The modeling step starts with the mathematical formulation of the system. In which the governing equations for each part of the physical energy storage system are driven depending on the energy required. These equations are used to simulate the true system using the virtual simulation tool of MATLAB-Simulink.

What is considered a gravity hydro-storage system?

The considered system is a gravity hydro-storage system. The proposed dimensioning methodology relies mainly on three techniques: the mathematical modeling of the system, a proposed simulation model, and a developed Fuzzy logic control system. The investigation considered two uncertain inputs: the energy and its rate of change.

What are the design parameters of gravity storage system?

The gravity storage system was categorized into four scales of power plants. As specified before, the gravity storage system under study has five design parameters, namely, container height ( $H_c$ ), piston height ( $H_p$ ), piston diameter ( $D_p$ ), return pipe length ( $L_p$ ) and return pipe diameter ( $d_p$ ).

Can abandoned mine shafts be used to build a gravity energy storage system?

Morstyn et al. proposed to use the abandoned mine shafts to build a dry model of the gravity energy storage system. The suspended weight is used to store energy via its movement on the mine shaft.

The three purposes of using energy storage are to store energy in a portable source, control power to energy ratio, and postpone or delay time of use [6], [7], [8]. These storage systems can provide flexibility for future smart grids [9], [10], [11]. According to the works of Mahmoud et al. [12], Alami [13], and Arabkoohsar [14] a set of mechanical storage systems ...

Considering the hydraulic system, energy efficiency can be increased by reducing throttling losses and energy storage/re-utilization. There are two ways to store the potential/kinetic energies, including electric and hydraulic energy regeneration systems (EERS and HERS) [3, 4]. The EERS usually contains a hydraulic

Energy is the material basis for human survival. With the rapid development of modern industry, human demand for energy has increased significantly, and the energy issue has become one of the most concerning issues of humankind [1], [2]. Among the various types of new energy sources, wind energy and solar energy have become key development targets globally ...
