What is a C&I energy storage system?

A C&I (Commercial and Industrial) energy storage system is an energy storage solution designed for commercial and industrial applications,such as factories,office buildings,data centers,schools, and shopping centers.

Why is energy storage important?

Storing energy from a supply (power plants or RESSs) for the highest consumers (industrial facilities) will reduce harm to the environment and diminish energy costsbecause this stored energy is then discharged to shift peak loads from power generation plants.

What are the different types of C&I energy storage systems?

The main types of C&I energy storage systems include battery-based,thermal,mechanical,hydrogen energy storage, and supercapacitors. Battery-based systems are the most commonly used type of C&I energy storage systems. They store energy using electrochemical batteries such as lithium-ion,lead-acid,or flow batteries.
