```

In the last years, ENEA proposed a new concept of thermocline thermal energy storage system based on a single storage tank containing a binary mixture of molten salts (working both as heat storage medium and heat transfer fluid in the solar field), and a once-through steam generator integrated in it.

They have since achieved several important results, culminating in the development of a potentially disruptive innovation. The research has led to a new technology applicable to supercapacitors-energy storage devices already ...

Proton batteries are gaining attention as an innovative and sustainable alternative in the energy field, and have been hailed as one of the potential solutions to next-generation energy storage devices. Protons have ...

electrolysis can be used as a medium for energy storage and for applications such as producing heat for buildings, refuelling fuel cell vehicles and as a source of feedstock for industry (Figure 2). An important distinction between hydrogen and other forms of energy storage is that hydrogen can be stored and transported through the
