

How will a data centre benefit Congolese digital users?

The data centre will facilitate internet traffic amongst content providers locally and internationally and make the internet experience faster, more resilient, and more affordable for all Congolese digital users.

What is happening in DR Congo?

The DR Congo is one of Africa's largest and fastest-growing markets, with demand for digital products and services forecasted to soar in the coming years with new subsea cables landing and expansion of inland terrestrial fibre networks.

Is DR Congo a Francophone country?

By land area, DR Congo is the second-largest country in Africa and the 11th-largest in the world. With a population of around 109 million, the Democratic Republic of the Congo is the most populous Francophone country in the world. The national capital and largest city is Kinshasa, which is also the economic center.

Does DR Congo have a waterway?

The DRC has thousands of kilometres of navigable waterways. Traditionally water transport has been the dominant means of moving around in approximately two-thirds of the country. As of February 2024, DR Congo had one major national airline (Congo Airways) that offered flights inside DR Congo.

How difficult is ground transport in the Democratic Republic of Congo?

Ground transport in the Democratic Republic of Congo has always been difficult. The terrain and climate of the Congo Basin present serious barriers to road and rail construction, and the distances are enormous across this vast country.

Does the Congo have Islam?

Islam has been present in the Democratic Republic of the Congo since the 18th century, when Arab traders from East Africa pushed into the interior for ivory- and slave-trading purposes. Today, Muslims constitute approximately 1% of the Congolese population according to the Pew Research Center.

Leaf harvest caused 15.8% storage root yield loss. Susceptible varieties produced lowest edible leaf (209 kg ha<sup>-1</sup>) and storage root (2530 kg ha<sup>-1</sup>) yields in all locations. Improved varieties suffered storage root yield reductions of 5-25.8%, equivalent to 400-1550 kg ha<sup>-1</sup>. Edible leaf yield and storage root yield were not correlated.
