

Will natural gas be a key energy source for Ireland?

Supporters of the project say it will underpin energy security by providing an alternative source of natural gas to British and Norwegian imports. Ireland relies on natural gas to generate more than half the electricity it uses.

Is future energy Ireland planning a battery storage project?

Future Energy Ireland has submitted a planning application for its first battery storage project, Ballynahone Energy Storage, to Donegal County Council. The

Which energy sources dominate Ireland?

oil, coal and peat. Despite the meaningful development of renewables, fossil fuels still dominate Ireland's primary energy supply. Source: SEAI 'Wastes (non-renewable)' in the graph represents energy from non-renewable sources. Total, 158,8 TWh, 48% from non-renewables, 7% from imports, 4% from other sources.

How has Ireland's indigenous energy production changed over the years?

Figure 17 shows how the breakdown of Ireland's indigenous production of energy has changed over the years. The step-change increase in 2016 was due to the connection of the Corrib field to the gas grid. This more than doubled our indigenous energy production from a baseline of about 20,000 GWh during 2000-2015 to a maximum of 50,000 GWh in 2016.

Which energy transformation processes are most important in Ireland?

As shown in Figure 28, the two most significant energy transformation processes in Ireland are electricity generation and gas processing.

How much energy does Ireland produce a year?

Total indigenous energy production in Ireland reached the highest level ever in 2018, of 50,488 ktoe, but has fallen since due to declining natural gas and fuel oil. Source: SEAI. Figure 27 shows the trend for net fuel imports (imports minus exports) over the period 2000-2018.
